How To Access The Dark Web

September 20, 2016

Are you trying to find out **how to access the dark web**?

Well, look no further, we have gone and done the research so we could show you step by step the best and safest way how to access the deep web.

We cover everything, from setting up Tor, how to choose a VPN, what not to do, finding the best sites to access, and extra steps to remain anonymous.

It is extremely easy to access the dark web and even easier to be detected on it if you don't take precautions. If you are new to the deep web, this guide will help you on your way.

According to researchers, only 4% of the internet is visible to the general public.

Meaning that the remaining 96% of the internet is made up of "The Deep Web".

Dark Web or Dark Net is a subset of the Deep Web where there are sites that sell drugs, hacking software, counterfeit money and more. We explain this further down the article if you are not up to speed.

If you are looking to access hidden marketplace's or darknet websites (with a .onion domain) then dark web access is done using the TOR network with the TOR browser bundle. TOR is the most widely used dark web browser.

How To Access The Dark Web Guide

Step 1: Go and get yourself a good VPN (Virtual Private Network) here, use it ALL of the time, no matter if you are on TOR or not. This site here reviews the best VPN's for use with TOR.

You should be taking your anonymity and security very seriously if you are visiting the Dark Web, especially if you are viewing any Darknet Markets.

Do not fool yourself and think that the ISP's (Internet Service Providers) and Law Enforcement are not trying to track those who use Tor to access the Dark Web, they are, and they are good at it so don't make it easy for them.

By using the simple VPN app, your dark web activities will be hidden from your ISP and government agencies as all of your internet usage will be encrypted. No one will even know you are using TOR, let alone browsing for darknet markets.

What's even better is that the VPN will give you a fake IP address, in another country if you like, so even if Tor is compromised then the trace just leads back to somewhere else that can't be linked to you.

What Is the Dark Web/Deep Net?

The other benefit of using a VPN is to prevent hackers stealing your identity and or personal files and photos from your computer.

You need to use a good VPN that keeps NO LOGS, fast performance, preferably accepts bitcoin as payment, has a kill switch for DNS leaks, and is compatible with TOR.

>>Click Here to find a good VPN<<

Then install your VPN, if you buy one of the better VPN's then it is usually just a one click install and one or two clicks to turn it on.

Step 2: You can't access the deep web just using a common browser like Internet Explorer or Google Chrome. To get dark web access you will need to download the dark web browser called TOR browser bundle. Only get it from the official TOR website, never download it from anywhere else!

Now close all of your browsing windows and all apps connecting to the internet like Google Drive, Skype, OneDrive, iCloud etc.

Then open your VPN app and connect to another location other than where you are at, make sure to use the OpenVPN protocol as it is the most secure.

Open up your normal favorite browser and then download TOR

TOR Official Website: https://www.torproject.org/download/download.html

Step 3: Install the TOR browser bundle on your PC or Mac. When the download is complete, double-click the downloaded file, choose the destination folder (the folder where you want to extract tor browser), and choose extract.

Step 4: Start TOR Browser. Open the folder where you extracted TOR browser and double-click "Start Tor Browser". The TOR start page will open in a browser window (it's actually a portable version of FireFox striped down).

From here, you now have a good level of anonymity and security and you are able to gain access to .onion websites through your dark web browser.

Congratulations…
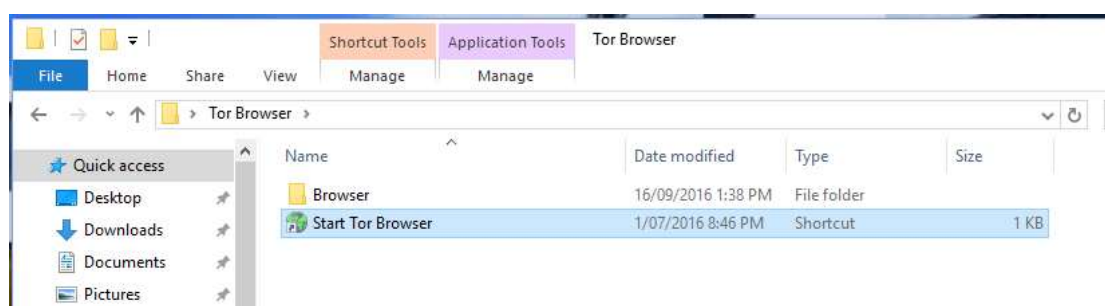

Next, you will want to visit a dark web site.

Now you have dark web access you should Click HERE to view the Darknet Market List so you can visit some
of the best black market websites on the Deep Web.

How to Legally Accept a Drug Package as Per Police and Prosecutors

If you do want to check out some dark net markets then you should follow the guide for that specific market
as it will show you step by step what to do to sign up, browse etc.

If you are looking for the biggest list of hidden deep web links go here so you can find exactly what you are
looking for. We have compiled one of the biggest lists of tested .onion sites on the dark web complete with
a search function, website name, description, categories, site status and even a screenshot of the landing
page so you can see if your site is online or dead.

Now we have shown you how to access the dark web we have some very important tips to share…

Bonus Security Steps For the Dark Web:

Step 5: DO NOT change the TOR browser window size unless you like living dangerously. The FEDS have
programs that can match identities on random things such and matching time online and other things with

the browser window size, I shit you not. If you don't change the size then it is the same as most other people.

Step 6: Please remember that TOR isn't necessarily 100% anonymous, you should **turn off JavaScript** within the dark web browser settings to help.

Block Javascript in TOR Browser

Step 7: Disconnect your webcam or block the camera with some black tape. Hackers and governments have ways of getting into your computer and turning on the video and cameras.

You can have intimate images of you be used as blackmail or extortion, or even worse, used by the feds.

Step 8: Disconnect your microphone or cover it with tape to muffle it good. The same goes for the microphone as the camera, the last thing you want is to be recorded saying incriminating things at home. It doesn't even have to be while on the dark web. Even the Facebook creator Mark Zuckerberg does it as he knows the dangers.

Covered camera and mic?

Step 9: NEVER use your real name, photos, email, or even password that you have used before on the dark web. This is the fastest way to be tracked. Use an anonymous email account and aliases that have nothing to do with you that you have never used before.

Hide Your Stash 2

Step 10: If you are using TOR on the dark web for anything other than looking at cute pictures of kittens, you should think seriously about your privacy and security. Jolly Roger has put together a comprehensive guide on how to stay safe on the deep web, view the guide here.

If you have read through this how to access the dark web guide and thought to yourself WTF? Then you are probably new to this and need a bit of background and information to get you up to speed. Please remember to share this post so everyone that wants to have a look on the Dark Web can do so and do it safely.

What is the Clear Web?

Firstly, there is the Clear Web/Clear Net. This is the normal internet where you do everyday things like check Gmail, Facebook, and Twitter and buy things from Amazon etc. All websites and web pages that a search engine like Google can find are on the Clear Net.

What is the Deep Web?

Then we have the Deep Web. This is a sub-set of the internet that can not be indexed (found) by search engines like Google. This includes all web pages that are behind membership logins, all company and organization web pages used internally and other data. The majority of the deep web does not have anything illegal on it.
Deep Web and Dark Web

What is the Dark Web?

Then we have the Dark Web. This is a sub-set of the Deep Web that contains all sorts of websites, both legal and illegal. The types of sites include black markets that sell things like drugs, counterfeit goods, and weapons, you also have hacking sites, porn sites, bitcoin tumbling, and even sites for hitmen. The variety of sites on the Dark Web is quite astonishing.
